PROPOSED REVISIONS TO DRAFT IS/MND
McKissick Subdivision Project

Staff is recommending the following revisions for the Draft Initial Study/ Mitigated Negative Declaration.

A correction to Section 2.0 Project Information, Sub-Section 10 – “Environmental factor potentially affected.” Due to formatting issues that occurred during printing of the document, incorrect checks were applied to the various environmental factors as noted below:

- The boxes that should be “checked” that were not, are as follows - Geology/Soils, Hydrology/Water Quality, and Mandatory Findings of Significance.

- The boxes that were “checked” that should not have been are Energy, Hazards/Hazardous Materials, Transportation, and Wildfire.

While there were formatting issues with the boxes that were checked, the text of the Recirculated Draft MND and its significance conclusions are unchanged and are correct.
